

Selecting Quality Sunflowers

by **Mill Creek Seed Co**

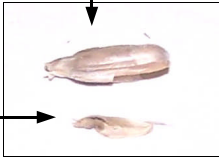

We took 3 seeds from this head

Blank seed with no kernel

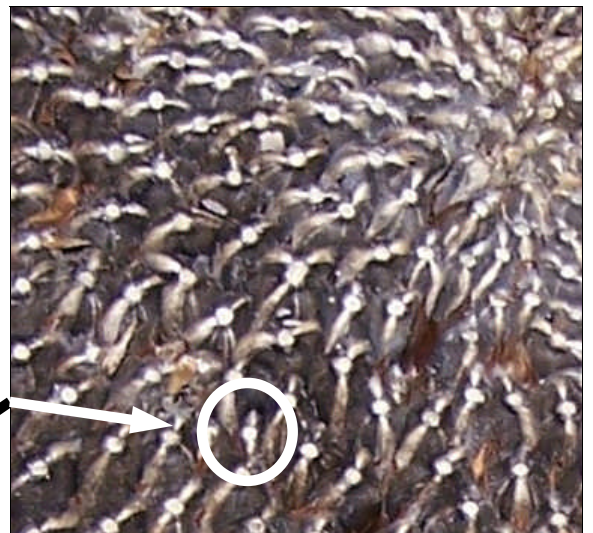

Immature seed with almost no kernel. i.e. discount seed

Mature seed with full kernel

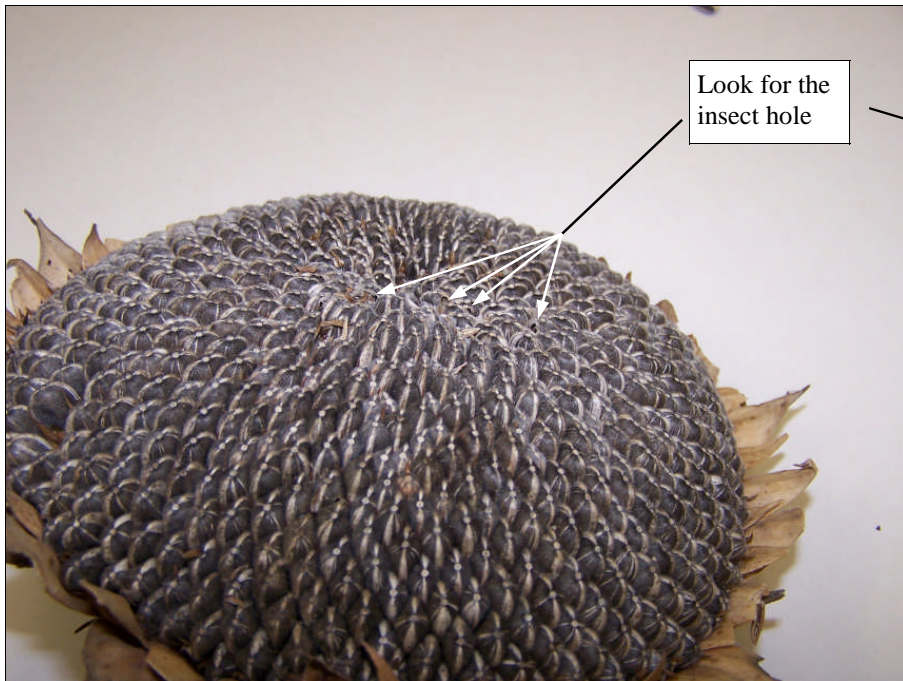

Which of the above seeds would you want in your 44 lb. bag?

A blank looks like this.

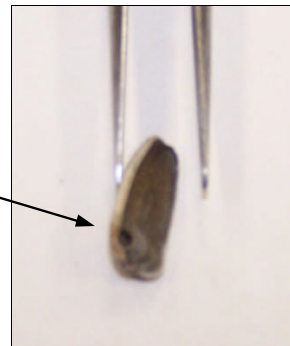

Every sunflower has good and bad seeds. Look for yourself and see if you can find the blanks with no kernel. These are small and thin. Immature seeds are usually found in the centre of the head. Mature seeds are generally around the outside of the head.

Identifying Insect Damage

Look for the insect hole

Discounters will use any seed to have a lower price.

If there is a hole in the seed there will be little or no kernel inside.
